

ABSTRACT

A method and system for allowing a user to define and use custom metadata is disclosed. The method and system include providing a network accessible server with a metadata library comprising a plurality of metadata vocabularies. The server allows the user to create a custom metadata vocabulary by displaying a user interface on a client computer in which the user specifies a plurality of properties defining the custom metadata vocabulary. When the custom metadata vocabulary is defined, it is stored in the metadata library for subsequent access. The method and system further allow the user to search the metadata library to select at least one of the metadata vocabularies to apply to an electronic resource.
